About Fenwick

The brand name is derived from Lake Fenwick, located in Washington, USA. It is on the shore of the lake, the brand was born. A brand that has been developing and producing fishing rods for generations of passionate anglers for over 60 years. Shortly after its foundation, Fenwick became known around the world for the production of quality fishing rods. In the 1970s, a new material for the production of rods appeared, which was lighter, stronger and the blanks of this material were much faster than the fiberglass used so far. The new material was carbon, and the Fenwick designers immediately started working with it.

In 1973, at the Fenwick factory, the world's first full carbon fishing rod, HMG (High Modulus Graphite), saw the world's light. This technology revolutionized the production of fishing rods and also changed the ways and techniques of sport fishing.

Today, Fenwick's tradition of technology continues to meet the specialized needs of avid anglers by producing and developing sophisticated fishing rods designed for specialized fishing techniques, with a focus on quality and satisfaction of the needs of sports fishermen.

FENWICK HMG

American brand Fenwick presents a new generation of legendary rods Fenwick HMG (High Modulus Graphite), specially designed for Central and Eastern Europe. The rods are specially designed for fishing techniques - jigging, microjigging and twitching, and are marked accordingly. These fishing techniques are popular with fishing for trout, perch, chub and zander. These rods are built with Carbon Bound technology from HM Carbon and features outstanding strength, high sensitivity and delicate action.

Low weight of rods was the main target. They are fitted with high quality Fuji guides and Fuji reel seat with exposed blank for better bite detection and lure movement. Fenwick HMG rods are the ideal choice for the spinning specialists who demand fast action of the rod, sensitive enough rods for fishing with small lures, low weight rods and quality components.

Fenwick HMG Micro Jig

The Micro Jig subseries is presented by four models: 2.13m / 0.5-5g, 2.13m / 0.8-8g, 2.29m / 2-10g and 2.44m / 3-15g. These extra UL, ultra light and lightweight HMG rod spin models have a fast, top action, with excellent sensitivity when fishing with small lures, which is ensured by a glued solid carbon tip. These models are mainly designed for fishing for trout, perch, chub and zander.

Fenwick HMG Jig

The HMG Jig subseries is available in 2.29m / 3-21g, 2.44m / 4-26g and 2.6m / 5-35g models. They are designed for fishing with small and medium size baits, on smaller but also larger lakes and rivers. It is ideal to use these rods in conjunction with various vertical fishing techniques for perch and zander. Fast action, a solid bar structure, and a sensitive, full carbon tip ensure great enjoyment of fishing for the most popular predatory fish.

Fenwick HMG Twitch

Twitch models are designed for fishing bigger baits and wobblers. They are characterized by a fast action of the blank, which bends from the top A action to the middle of the rod.

FENWICK HMX II

The new generation of Fenwick HMX spinning rods is specially designed to meet the needs of Central and Eastern European fishermen, suitable for fishing in lakes or rivers. They are mainly characterized by solid, tough carbon blank, low weight, excellent sensitivity and use of quality components. The rods excel in fishing with small and lightweight baits, that are popular with fishing for trout, chub, perch or zander. HMX rods are a good choice not only for the novice fisherman, but also for more demanding specialists. The HMX series offers multiple models by type of fishing: Micro Jig, Jig and Twitch.

All Fenwick HMX rods have a high-quality cork handle and reel seat with top mounting nut. The handle can be full or split, depending on the model. Fuji Japan guides are positioned according to a modern concept. These guides reduce the chance of line twisting and increase rod sensitivity.

The modern and slim rod blanks of HMX series are made using Cross Scrim technology. Overlapping carbon fibers provide fast action and high strength while maintaining very low rod weight.

Fenwick HMX II Micro Jig

The Micro Jig subseries represents two models: 2.13m / 1-7g and 2.29m / 2-12g. The rods have a fast action blank and excellent sensitivity when fishing small lures is ensured with solid carbon tip.

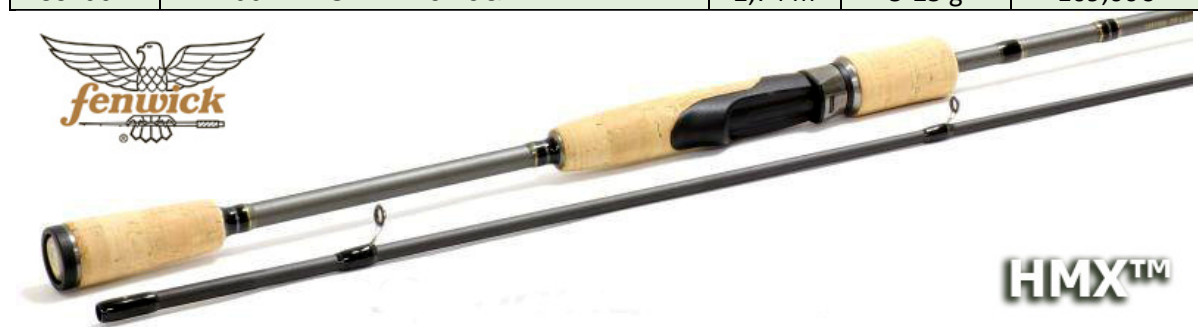

Fenwick HMX II Jig

The Jig models are designed for fishing with bigger baits, on smaller but also larger lakes and rivers. The fast action, solid and powerful blank and sensitivity ensuring bonded solid carbon tip characterize these spinning rods.

Fenwick HMX II Twitch

Twitch models are designed for fishing bigger baits and wobblers. They are characterized by a fast action of the blank, which bends from the top A action to the middle of the rod.

FENWICK EAGLE

High quality and reliability at a bargain price is characterized by Eagle rods from the American company Fenwick. The most advanced materials and high quality components have been used to produce Eagle rods. These rods have a foam EVA handle that is comfortable to touch even during low temperature fishing. The rods are fitted with stainless steel guides with ceramic inserts. The shape and placement of the guides reduces the chance of line twisting and increases rod sensitivity. The Extra Power Blank technology used in the production of Eagle rods helps to reduce the weight of the rods. High strength, low weight, responsive blanks, modern design and high quality components. These are all the necessary features that provide the Fenwick Eagle rods at a very competitive price. Fenwick Eagle rods are a decent choice not only for the novice fisherman, but also for more experienced anglers demanding quality and reliability.
